```
Aim:
```

Write a program to find the factorial of a given number using recursion process.

Exp. Name: Write a C program to find the Factorial of a given number using

At the time of execution, the program should print the message on the console as:

```
Enter an integer :
```

Recursion

For example, if the user gives the input as:

```
Enter an integer : 6
```

then the program should **print** the result as:

```
Factorial of 6 is : 720
```

Note: Write the recursive function factorial() in Program901a.c.

Source Code:

Program901.c

```
#include <stdio.h>
#include "Program901a.c"

void main() {
   long int n;
   printf("Enter an integer : ");
   scanf("%ld", &n);
   printf("Factorial of %ld is : %ld\n", n ,factorial(n));
}
```

Program901a.c

```
long int factorial(long int n);
long int factorial(long int n)
{
   if(n==0)
   return 1;
   else
   return(n*factorial(n-1));
}
```

Execution Results - All test cases have succeeded!

	Test Case - 1
User Output	
Enter an integer : 5	
Factorial of 5 is : 120	

	Test Case - 2
User Output	
Enter an integer : 7	
Factorial of 7 is : 5040	

Test Case - 3
Jser Output
Enter an integer : 4
Factorial of 4 is : 24

Test Case - 4	
User Output	
Enter an integer : 8	
Factorial of 8 is : 40320	

Test Case - 5	
User Output	
Enter an integer : 0	
Factorial of 0 is : 1	

	Test Case - 6
User Output	
Enter an integer : 9	
Factorial of 9 is : 362880
